

hospitool

managing the future

14.12.2007

Heikki Korvenranta

hospital

- history of finnish hospitals over 250 years
 - hundreds of hospital buildings
 - life-cycle is over 100 years
- hospital in future
 - outpatient/inpatient wards, intensive care, home, "health-kiosk", virtual hospital, internet, etc..
 - environment for care and for healing

the functions of a hospital

- hotel
 - shelter, heat, light, basic needs
 - > results of the care
- care environment
 - knowledge, know-how, care processes
 - > qualitative results of the care
- production environment
 - supply chain logistics, production processes
 - > quantitative results of the care
- healing environment
 - more important than we think
 - > qualitative results of the care
- working environment
 - tens of speciality groups of staff
 - safety, comfortable
 - > quantitative and qualitative results of the care

the goal of hospitool project

- to develop and to promote the use of tools for requirements management as part of procurement and planning processes during hospital planning
- the tools should be applicable over the entire hospital life-cycle
